

# Tape Manufacturing

## Abstract

A tape (T) to which a plurality of elements (C) are affixed by means of a glue in a solid state is manufactured in the following manner. In a gluing step, in which elements (C) are glue to a basic tape (T) by means of a glue in a liquid state so as to obtain a glued tape. The gluing step is followed by a winding step and a heating step. In the winding step, the glued tape (T) is wound while the glue is in a state between the liquid state and the solid state, so as to obtain a winded glued tape. In the heating step, in the winded glued tape is heated, so that the glue reaches the solid state.
